Revision Notes on Arithmetic Progression. If 'a' is the first term and 'd' is the common difference of the arithmetic progression, then its n th term is given by  $a_n = a + (n-1)d$  It is not the time to look for by chance solution of mathematical expectations as it is time to go for chosen criteria of arithmetical ideas. This complete theme includes not only definition but also examples and this unique package will encourage you to work more and more with the clarity. Arithmetic (from the Greek ??????? arithmos, "number" and ?????, tiké [téchne], "art") is a branch of mathematics that consists of the study of numbers, especially the properties of the traditional operations on them—addition, subtraction, multiplication and division. Arithmetic and geometric progressions
