In probability theory and statistics, the exponential distribution (also known as the negative exponential distribution) is the probability distribution that describes the time between events in a Poisson point process, i.e., a process in which events occur continuously and independently at a constant average rate. Can I force R to use regular numbers instead of using the e+10-like notation? I have: 1.810032e+09 # and 4 within the same vector and want to see: 1810032000 # and 4 I am creating output for ... Big O notation is a mathematical notation that describes the limiting behavior of a function when the argument tends towards a particular value or infinity. In this section we will introduce exponential functions. We will be taking a look at some of the basic properties and graphs of exponential functions. We will also discuss what many people consider to be the exponential function,  $f(x) = e^x$ .
