

Download Genitourinary Differential Diagnosis

WebPathology is a free educational resource with 9562 high quality pathology images of benign and malignant neoplasms and related entities. The differential diagnosis of testicular pain is broad and involves conditions from benign to life-threatening. The most common causes of pain in children presenting to the emergency room are testicular torsion (16%), torsion of a testicular appendage (46%), and epididymitis (35%). In adults, the most common cause is epididymitis. These journal metrics provide authors with extra insight into the journals and help them in their journal selection process when submitting an article for publication. The use of postoperative prophylactic antibiotics in stented distal hypospadias repair: a systematic review and meta-analysis
