INTRODUCTION — Chronic kidney disease (CKD) is associated with insulin resistance and, in advanced CKD, decreased insulin degradation. The latter can lead to a marked decrease in insulin requirement or even the cessation of insulin therapy in patients with type 2 diabetes. Blood sugar control is at the center of any diabetes treatment plan. High blood sugar, or hyperglycemia, is a major concern, and can affect people with both type 1 and type 2 diabetes. Abstract. The American Diabetes Association and the European Association for the Study of Diabetes convened a panel to update the prior position statements, published in 2012 and 2015, on the management of type 2 diabetes in adults. Hyperglycemia in diabetes can occur for many reasons. Know the causes, symptoms and treatments of high blood sugar and when to get emergency help.
