

Download Natural Law And The Structure Of Matter

Natural law and natural rights follow from the nature of man and the world. We have the right to defend ourselves and our property, because of the kind of animals that we are. Natural selection is the differential survival and reproduction of individuals due to differences in phenotype. It is a key mechanism of evolution, the change in the heritable traits characteristic of a population over generations. First published in 1980, *Natural Law and Natural Rights* is widely heralded as a seminal contribution to the philosophy of law, and an authoritative restatement of natural law doctrine. The natural environment encompasses all living and non-living things occurring naturally, meaning in this case not artificial. The term is most often applied to the Earth or some parts of Earth.
