Pathology is the study of the causes and effects of disease or injury. The word pathology also refers to the study of disease in general, incorporating a wide range of bioscience research fields and medical practices. INTRODUCTION. Breathing discomfort is one of the most common and distressing symptoms experienced by patients. While there are no symptom-specific data about the prevalence of this problem, the epidemiology of cardiac and pulmonary diseases indicates that the magnitude of the problem is large. Pathophysiology (a.k.a. physiopathology) – a convergence of pathology with physiology – is the study of the disordered physiological processes that cause, result from, or are otherwise associated with a disease or injury.
