Today, psychology is defined as "the scientific study of behavior and mental processes." Philosophical interest in the human mind and behavior dates back to the ancient civilizations of Egypt, Persia, Greece, China, and India. With the dawning of the twenty-first century there arose another new approach to psychology, known as Positive psychology. Originally a development of humanistic psychologists' research on happiness and their focus on treating mental health rather than mental illness it is intended to complement, not to replace, traditional psychology. Psychology is the study of the mind and behavior, according to the American Psychological Association. It is the study of the mind, how it works, and how it affects behavior. Abnormal psychology is the field devoted to the study of causes of mental dysfunction (mental illness, psychopathology, maladjustment, emotional disturbance).
